MATERIAL HANDLING BEET BUCKET

- The Beet Bucket has a Zero Dig Flat Bottom designed to stay at ground level to eliminate dirt from being picked up with the produce.
- The Full Bottom is bolt-on, reversible & replaceable and also increases bucket life.
- A special weld-in edge is used to minimize damage to the produce when loaded into the bucket.
- Specially designed side plates and side cutters help to eliminate spillage when loading, and also achieves maximum capacity.
- Increased visibility of the spill plate allows the operator visual confirmation of their load capacity.
- A built-in level indicator on the top of the bucket allows the operator a second point of visibility from the cab.
- This enables them to see if the bucket is flat before penetrating the pile.
- Inside corner design prevents the beets from packing in the corners.

Available as Quick Coupler or Pin-On Style Mounting.
